

Video Transcript: CommercePayments™ APCard

You're always looking for new sources of revenue.

At Commerce, we understand that.

Creating new revenue, increasing electronic payments, and reducing expenses is what CommercePayments is all about.

Introducing CommercePayments AP Card, an automated accounts payable program that converts paper check payments to virtual card payments while providing an opportunity to earn monthly revenue share.

AP Card works with your existing account system to provide flexible supplier payment options that reduce check writing costs and minimize fraud risk.

It's as simple as replacing paper checks with virtual card payments.

With AP Card, you can maintain your banking relationships as well as your existing processes and procedures.

You'll experience enhanced controls and detailed reporting without hosting software.

Why choose CommercePayments over other AP card solutions?

We'll get your suppliers onboard for you.

Commerce Bank provides a dedicated supplier enrollment team who will contact your suppliers and get them set up quickly to accept AP card payments.

The enrollment team will work to convert as many check payments to electronic AP card payments as possible in an effort to reduce check costs and maximize your monthly revenue share potential.

This team will remain committed to growing your program by providing ongoing enrollment of suppliers throughout the life of your program.

By accepting virtual card payments, your suppliers can experience reduced accounts receivable collection costs, guaranteed funds, and potentially increased cash flow.

AP Card is just one component of the CommercePayments suite designed to increase electronic payments while providing a new revenue stream for your organization.
